Invoice journey

From the mailbox to the ERP, in six stops.

Nothing wrong reaches the ERP.
Nothing gets lost.
Every change is traceable.

01 → 02 → 03 → 04 → 05 → 06

Mailbox

IMAP or Gmail.
A dedicated mailbox.

Store first

Email + original PDF saved before anything can fail.

Read

Every PDF / XML attachment. XRechnung & ZUGFeRD read directly.

Guard + AI reads

Checks for manipulation, then sorts the document and extracts the fields.

Rules decide

Fixed rules, unit-tested.
No AI in this step.

Booked in the ERP

Real-time API call.
Never twice.

or a person reviews

STOP 04 · SEVEN DOCUMENT TYPES

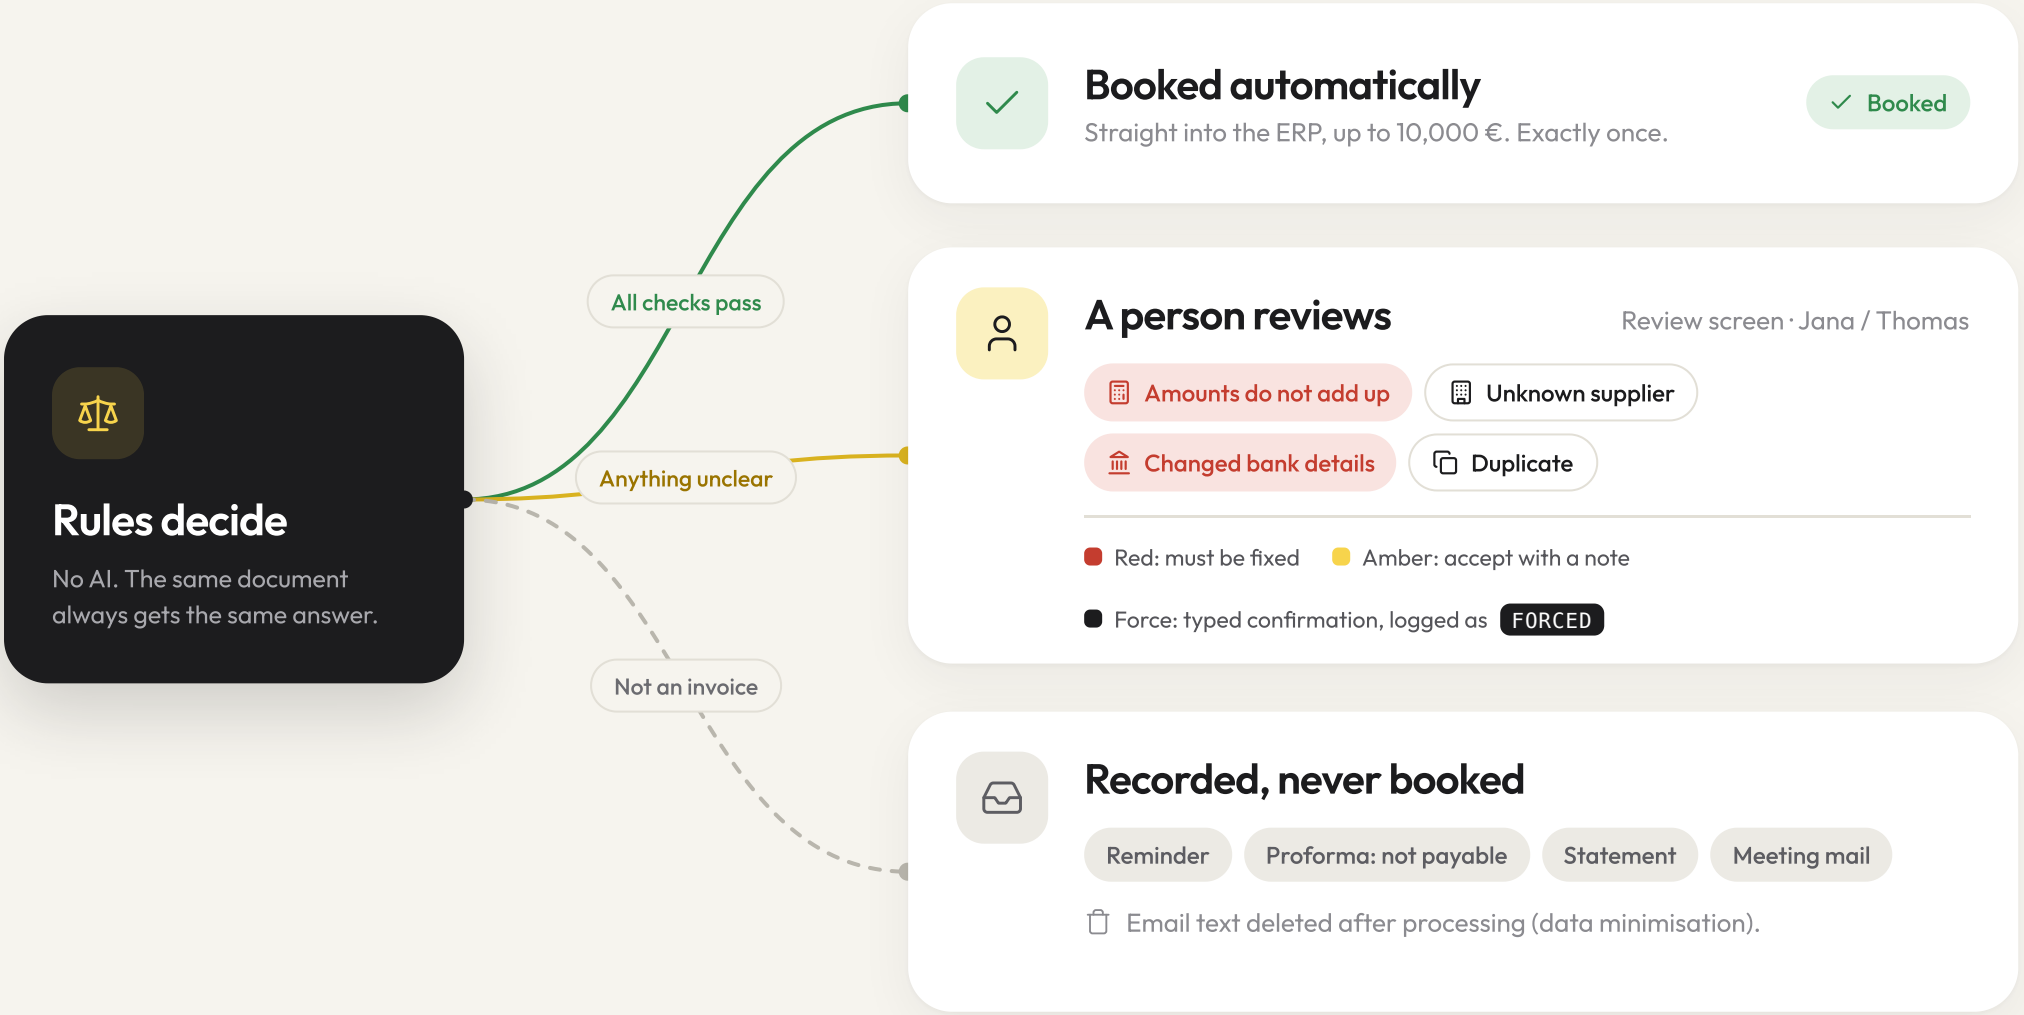

- Invoice
- Credit note
- Reminder
- Proforma
- Order confirmation
- Statement
- Other

STOP 05 · WHAT THE RULES CHECK

- Every number appears in the document
- Net + VAT = gross
- VAT rate per country
- Duplicates, even written differently
- Unknown supplier
- Changed IBAN
- Look-alike sender
- Auto-booking only up to 10,000 €

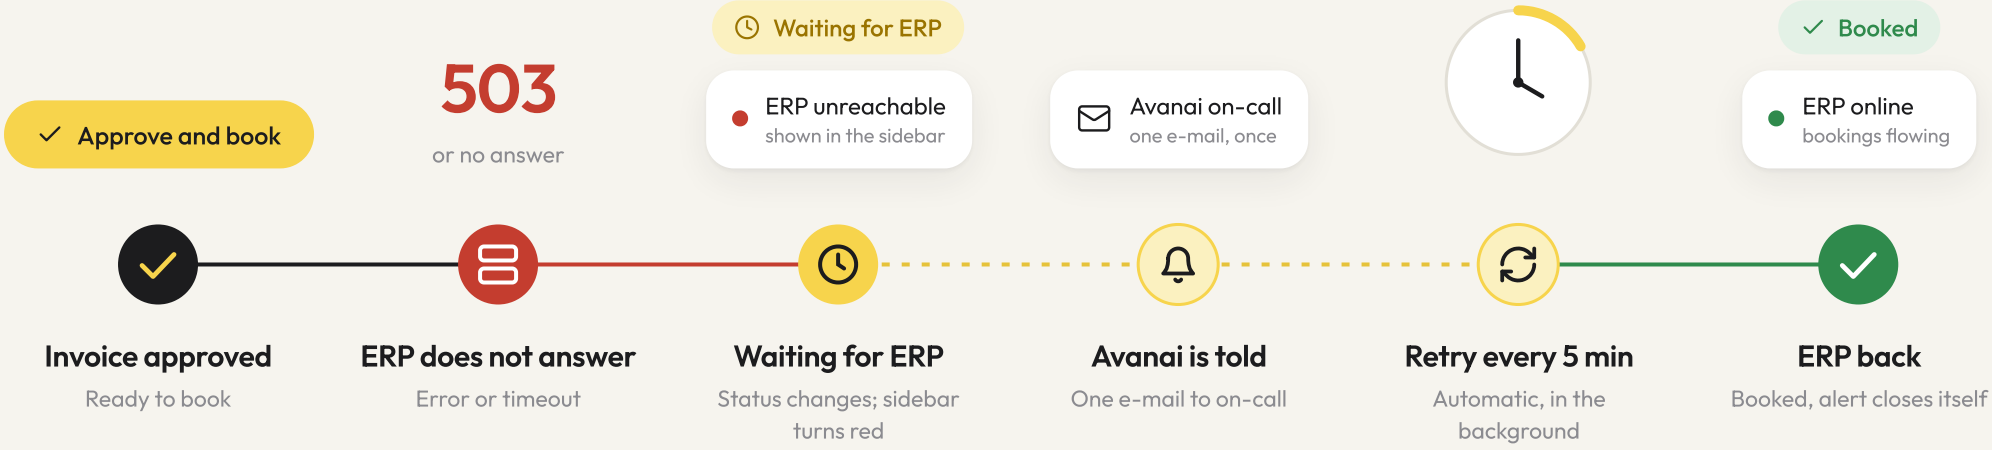

Three outcomes. Nothing in between.

Every document ends in exactly one of these.

When the ERP is down

The invoice waits. Nobody has to remember it.

Booked exactly once

Never twice, even after many retries.

One alert, not a flood

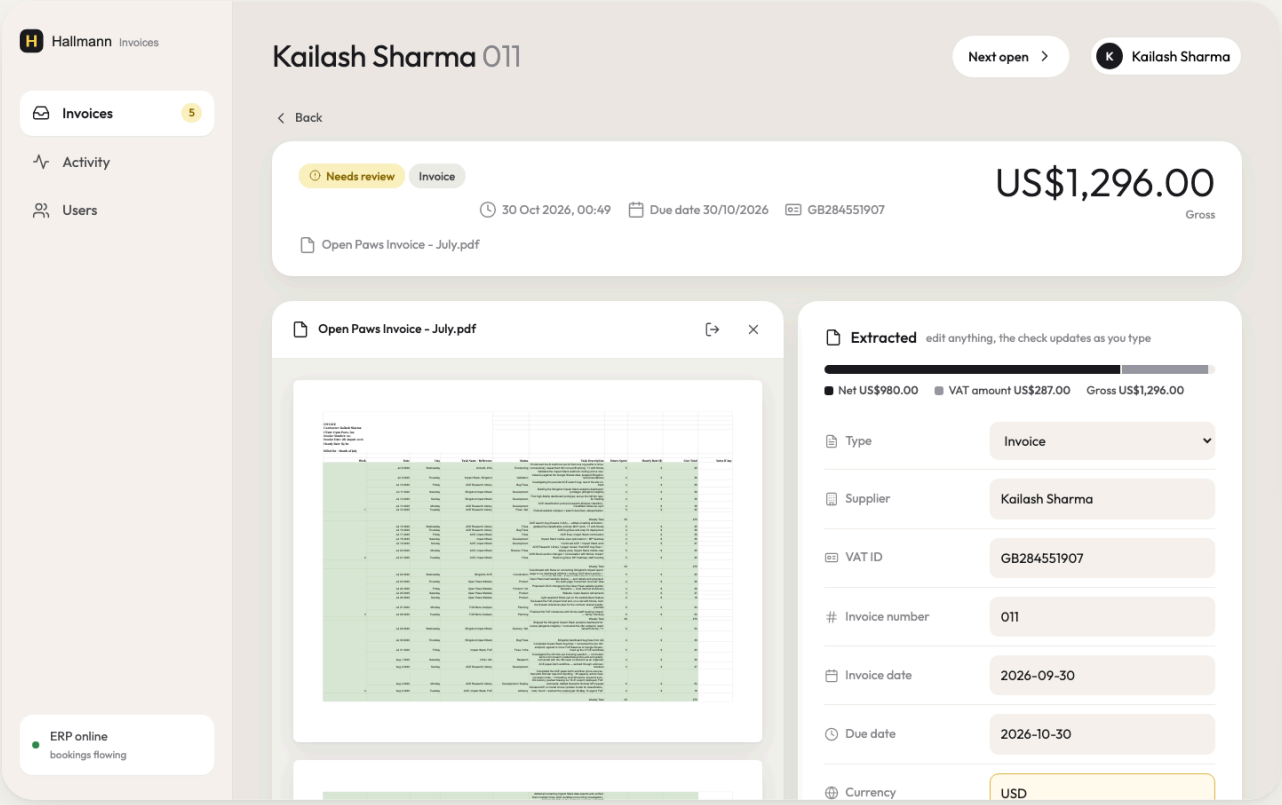

And it closes itself when the ERP is back.

Nothing gets lost

The invoice is already stored.

For Jana and Thomas

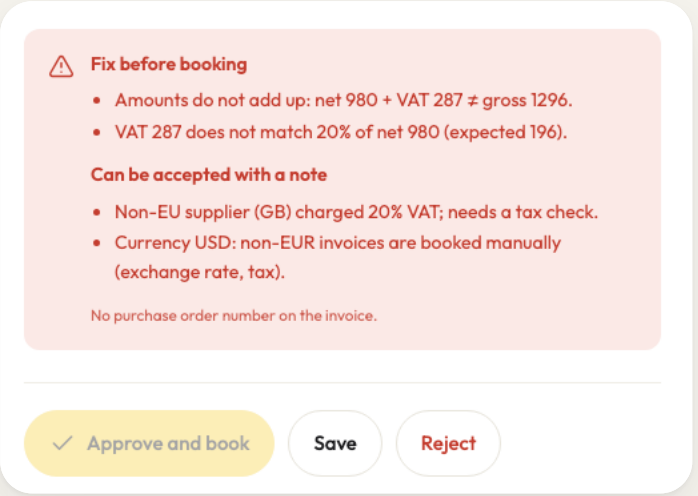

The review screen

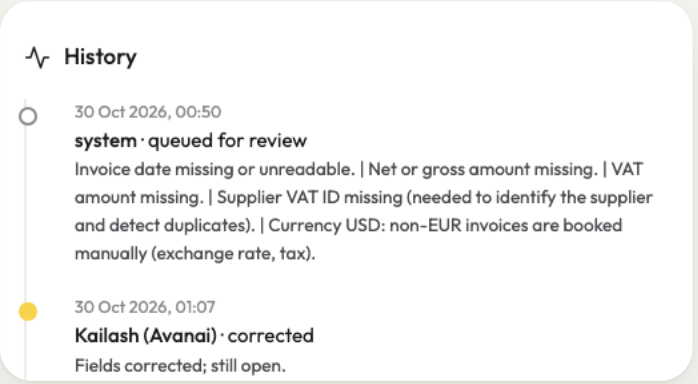

1 **Original next to the fields**
The PDF on the left, what was read on the right. Edit anything.

ONE CLEAR STATUS PER INVOICE

Needs review · Waiting for ERP · Booked · Duplicate · Not an invoice

2 **Checks update as you type**
Amounts auto-calculate from the gross.

3 **Every change is logged**
Append-only: who, when, before and after.

Evidence

How we know it works

30

Unit tests

On the rules that decide what gets booked.

19

Emails, end to end

Sent through a real mailbox, all the way through.

26

Cases, many formats

Tables · Multi-page · Two VAT rates · US dates · Credit notes · Proformas · Statements · XRechnung · Official ZUGFeRD samples

ERP outage test

ERP switched off, then on again: booked exactly once.

BEFORE GO-LIVE

- Connect Hallmann's ERP
- EU-hosted AI model
- Dedicated invoice mailbox
- Real hosting with backups
- Pilot on real, anonymised invoices
- Supplier master synced from the ERP
